

Domtar Announces New EarthChoice® Opaque Offset 30%

Domtar has revamped its Recycled Offset 30% product line to provide customers and end users improved product solutions. Domtar is pleased to introduce EarthChoice Opaque Offset 30%, a competitive high bright and opaque recycled Offset that delivers trouble-free printing and consistent quality.

The enhancements include elevating the brightness from 92 to 94 and an added point of opacity. While the eye can detect a brightness bump of 2 points, the blue-white shade remains the same, providing the paper a favorable yet subtle visual improvement.

EarthChoice Opaque Offset 30% is competitively positioned to meet a wide range of applications that require recycled content. This product line is Forest Stewardship Council™ (FSC®) certified and will be stocked in 50 lb. through 70 lb. text in cut-size sheets, folio sheets and rolls. Stock inventory will turn on a rolling basis as existing inventories are depleted. Effective with orders entered April 9th, manufacturing orders will be produced to the new specifications.

EarthChoice represents the perpetual dialogue that Domtar has with its customers and stakeholders and is a reminder that sustainability is a process, not a destination. EarthChoice means increasing responsibility for the entire lifecycle – from the forest, through responsible production and usage, and recycling. Domtar is committed to meeting the highest standards for forest, environmental and quality management.
