

Xerox® Paper and Specialty Media Line Update

Last September, Domtar announced some changes to its Xerox® Paper and Specialty Media Line, including a series of product enhancements, a reorganized product line, as well as a whole new packaging look.

The packaging change reflects the new product lineup, but also provides a refreshed and modernized look and makes use of a more simplified and straightforward approach to product features, benefits and usage.

With many of these changes completed and updated products already shipping from Domtar's mills and warehouses, customers can expect to see the new packaging look on their favorite Xerox® Paper and Specialty Media products arriving soon.

Xerox® Vitality™ Multipurpose Printer Papers, (previously Xerox® Business 4200, Recycled Business 4200 and Xerox® Pastels) have been completely transitioned into new packaging.

Xerox® Bold™ Digital Printing Paper (uncoated product, previously Color Xpressions Elite and Select) has also been fully transitioned.

Several other key changes have been implemented as well. In order to help our customers meet their sustainability and corporate responsibility initiatives, all of the Xerox® Vitality™ Multipurpose Printer Papers and the Xerox® Bold™ Digital Printing Papers are now Forest Stewardship Council® (FSC®) certified, as well as made in the USA and Canada.

Additional packaging updates will continue to roll out in the coming months, including those on Xerox® Bold™ Coated Digital Printing Papers, carbonless products, and on the Xerox® Revolution™ Specialty Media items.

For detailed information regarding individual items, please contact your customer service representative or account manager. To learn more about the product line reorganization, new packaging or product enhancements, please visit www.domtar.com or www.egpaper.com.
